

INDUSTRIAL DECONTAMINATION SERVICES PTY LTD

about IDS

IDS is a privately owned Australian business established in 1995 in Brisbane. Originally established as a PPE distribution company selling PPE and workwear to Brisbane businesses. Working with leading glove manufacturers, glove recycling was introduced as a cost cutting service for clients in 1998. This work was contracted out to commercial laundries around Brisbane and was quickly proved to be a failure due to the damage that occurred in commercial laundry systems. Therefore in 2001 the first "laundry" was established at Brendale in Brisbane. The process was refined through an extensive R&D program and techniques established which minimised or eliminated the in laundry damage. In 2007 the safety products distribution business was sold and Industrial Decontamination Services Pty Ltd was established as Australia's and one of the world's first stand-alone PPE decontamination business.

With only 2 staff in 2007 the business has grown to 40 staff and 4 decontamination facilities in Brisbane, Gladstone, Melbourne and Perth. IDS has plans for additional sites so as to provide a comprehensive national coverage. IDS are also working with businesses from around the globe to establish our services where they are needed.

The IDS decontamination program is the core of our operation but only forms a small part of what we offer. The IDS asset care and management program provides a whole of life management system that includes everything from sourcing and procurement of products, warehousing and distribution, through whole of life care and maintenance to destruction. The IDS Rapptor database captures every activity over the life of each asset providing our clients with a complete view of their PPE system.

our asset decontamination system options

Care and maintenance programs

IDS services offer a whole of life PPE and garments management services using our world leading decontamination processing technology. From product design and world-wide sourcing, to warehousing and distribution of PPE and PPC, issuance and then whole of life care and maintenance and repairs. We also arrange secure destruction when your PPE assets have reached the end of their useful life. Every asset is uniquely serialised using RFID or bar code at the time of arrival into the IDS warehouse. Thereafter any activity throughout the entire effective life of your asset will be recorded using the IDS Database system. IDS services care and maintenance program will mitigate your businesses liability, reduce PPE and PPC costs and will provide one simple and central point of service for your entire PPE requirement.

Fire fighting PPE and PPC

IDS has conducted extensive testing regarding the suitability of our decontamination process for processing fire fighting PPE and PPC. Our world leading process incorporates minimal mechanical action, low temperature, low pH and uses IDS's unique chemical formulations. These factors combined eliminate the damage that occurs in typical commercial laundry applications. Using our process has been shown to extend the typical life of a fire fighting ensemble by up to 3 times when compared to commercial laundry processes or dry cleaning.

Technical PPE and PPC care systems

The decontamination process has been adapted to allow processing of a wide range of expensive and technical protective equipment. These include breathing apparatus and respiratory equipment in high risk environments, powered air respirators including welding systems, chemical protective clothing and equipment, height safety and confined spaces access gear, body armour, and arc flash clothing.

Uniforms and basic PPE

IDS also provides basic laundry services for our PPE clients including general workwear and linen, hand towels and matting, general PPE including gloves, gum boots, eyewear, hard hats and hearing protection. While these items are not individually tracking as an asset, when processed as part of the IDS Care and Maintenance program our clients can easily prove that they are exercising due diligence for PPE and PPC programs.

Technical Inspections and Repairs

IDS service centre staff are all trained and authorised by the original equipment manufacturer to perform technical inspection and recertification on a wide range of PPE and PPC. Each time an asset passes through an IDS Decontamination Facility it is inspected on no less than 3 occasions through the process. This attention to detail ensures that any faults are identified and repairs carried out in accordance with manufacturers requirements.
